Full-Stack Software Engineer

Full-Stack Software Engineer experienced in building and shipping end-to-end consumer-facing applications using React, Next.js, Node.js, and PostgreSQL. Proven track record integrating RESTful APIs, using CI/CD pipelines, and delivering reliable backend and frontend services in an Agile team environment. Actively leverages AI-assisted development tools (Claude and ChatGPT) to accelerate delivery and improve code quality.

RELEVANT WORK EXPERIENCE

Backend Engineer

Jan 2023 - Oct 2024, April 2026 - Present

Story Squad

Collaborated with a team of 10 to deliver an educational application that encourages kids to engage with reading, writing, and drawing.

- Developed and maintained RESTful APIs backed by PostgreSQL, ensuring secure and reliable data access.
- Implemented unit tests, used a CI/CD pipeline, and DevOps practices to detect and prevent production issues, improving system stability.
- Participated in code reviews and weekly engineering discussions, reinforcing clean coding practices and team-wide collaboration.
- Authored and maintained technical documentation in Notion, Confluence, and Swagger Docs supporting long-term maintainability and onboarding.

Full-Stack Software Engineer

Jan 2024 – April 2026

Ambit

Collaborated with a team of 4-5 on the development of a healthcare data management tool enabling clinicians to securely access and reference patient data, with a strong focus on accuracy, usability, and compliance.

- Built and maintained responsive UI components with Next.js, Redux, and Tailwind CSS using AI-assisted development to support clinical workflows.
- Used a CI/CD pipeline, and DevOps practices to detect and prevent production issues, and improve system stability.
- Developed and optimized a RESTful API and data pipelines with Node.js, Express.js, JavaScript, Prisma, and PostgreSQL using AI-assisted development to deliver reliable patient data at scale.
- Participated in Agile development workflows including Git-based code reviews, pull requests, and collaborative releases.
- Modernized legacy systems by migrating to updated frameworks and databases with minimal downtime, improving maintainability and compliance readiness.
- Partnered with cross-functional stakeholders to align technical solutions with healthcare data, performance, and security requirements.
- Authored and maintained API and technical documentation using Postman and Confluence to support onboarding and long-term maintainability.

SKILLS

Programming Languages

JavaScript, HTML, CSS, Python, SQL

Databases

PostgreSQL, MongoDB

Frameworks and Libraries

React, Redux, Next.js, Node.js, Express.js, REST APIs, Tailwind CSS, Prisma, Knex, Vue3

Testing Tools

Jest, React Testing Library

Platforms and Tools

Git, GitHub, Postman, Jira, Swagger Docs, Figma, Confluence, Notion, Netlify, Render, Whimsical

Soft Skills

Debugging Code, Critical Thinker, Growth Mindset, Team Collaboration, Problem Solver

EDUCATION

Oregon State University

Bachelor of Science in Computer Science
Corvallis, OR; E-campus
GPA: 4.0
Jan 2024 - Present

Grand Valley State University

Bachelor of Science in Mathematics
Allendale, MI
GPA: 3.57
Aug 2012 - May 2018

Full-Stack Software Engineer

Dec 2023 – January 2026

The Biscuit Garden

Designed and developed an end-to-end full-stack website as a solo software developer and designer, delivering a scalable React-based solution for a dog daycare and boarding business.

- Integrated automated email delivery of PDF form submissions to streamline operations and improve record-keeping.
- Implemented test-driven development practices to proactively identify and resolve bugs in production.
- Maintained and iterated on the application post-launch, improving performance, security, and user experience based on real-world usage.
- Independently lead client engagement, communicated technical concepts and project updates with non-technical stakeholders to align solutions with business needs.

UI Developer, Intern

May - July 2025

Blue Cross Blue Shield – North Carolina

Started developing the Solution Architects' Aardvark V2 application with PostgreSQL, Node.js, Express.js, and Vue.js which helps them manage the architecture for the Blue Cross Blue Shield Enterprise.

- Built and migrated 10 PostgreSQL tables from a legacy MySQL system, ensuring data integrity and long-term scalability.
- Developed CRUD API endpoints for 5 database tables supporting frontend and backend integration across enterprise systems.
- Rapidly learned Vue.js to support frontend modernization and improve usability of architecture management tools.
- Analyzed legacy data relationships and collaborated with stakeholders to clarify data flow and system architecture.

Backend Engineer

May 2023 - Aug 2023

SchwaaWeb

Developed backend services for a customer-facing application integrating ChatGPT, collaborating on a cross-functional team of 6.

- Designed and implemented RESTful APIs with Node.js, Express.js, and relational databases to support efficient data flow, third-party API integration, and reliable performance.
- Produced and maintained technical documentation in Markdown and Confluence to support team knowledge.
- Quickly learned new tools and technologies to support feature delivery and deployment.

PROJECTS

Air Hockey Database

OSU Jan – March 2026

Designed and built in a team of 2 a full-stack database application to centralize competitive air hockey match records for the USAA community. Architected a normalized MySQL schema (3NF) across 8 entities with full CRUD functionality, built with Node/Express.js and React.

MathPath

OSU Oct 2025 – Dec 2025

Full-stack math learning app using microservices architecture with independently deployed services for auth, computation, problem generation, timing, and user data, co-developed with a team of 5. Built with Next.js/React, Node/Express.js, PostgreSQL, MongoDB, and Flask; emphasized clean APIs and service isolation.

Professional Website

Personal Apr 2023 - Present

Built and deployed a personal portfolio website to showcase software engineering projects and experience using React. Deployed on Netlify.

Portfolio Website

OSU Sept 2024 – Dec 2024

Designed and developed a full-stack portfolio website using React, Node/Express.js, MongoDB, and REST APIs, integrating internal and external data sources. Deployed on Netlify.

Atomic Chess

OSU Apr 2024 – May 2024

Implemented an Atomic Chess game in Python using object-oriented design to model game state, rules, and move logic.

Tic Tac Toe

Personal Sept 2024 – Dec 2024

Developed a React-based Tic-Tac-Toe game featuring a reset function, player directions, and a turn history for move revisitation. Deployed on Netlify.

Character Randomization Website

Personal Aug 2022 – Aug 2023

Started building a D&D character generation platform supporting random, semi-random, and custom creation workflows; serving as both a generator and reference tool. Developed using React, PostgreSQL, and Node/Express.js. Deployed on Netlify.
